

Polyurethane coating offers excellent resistance to dirt buildup, while providing a durable surface that's easy to maintain. Needs no dressing or wax—ever.

The materials in Hero Multisport do not support the growth of bacteria so your floor essentially sanitizes itself.

## **PROTECTION**

To help protect your floor covering from varying levels of traffic and also as the first line of defense against the weather, we strongly recommend that barrier mats be installed at entry points to the building to limit the amount of wet and dry soiling. If maintained correctly, these barrier mats should limit the transfer of foot-borne contamination and make the daily cleaning and maintenance program even easier. This is a very simple, but powerful measure for better appearance of your new floor.

## **EASY MAINTENANCE**

### No Wax & No Buff Methods

- Dust Mop: To remove dust and grit, as needed.
- Damp Mop: Clean floor with a neutral pH detergent such as Johnson Diversey “Stride” or equivalent. Follow manufacturer’s directions for mixing, use and rinsing.  
And/Or:
- Machine (Auto Scrubber): If desired, scrub with a rotary scrubber using a 3M white-type scrubbing pad or automatic scrubber with equivalent scrubbing pads or brushes. Avoid using aggressive 3M pads to eliminate excessive abrading.

## **SPOT CLEANING**

- Black heel marks can be easily removed using a white cloth dampened with mineral spirits.
- Wipe up any remaining excess residue (film) using a clean, dry cloth.
